Details

1.	TMS I.D.	TMS-2025-0867
2.	Originator	Agency A
3.	Date	Sep 05 2025 10:30 AM
4.	Theatre	HUMINT
5.	Current Priority	High
6.	Subject	AI/ML Study Group - Traffic Analysis ML Models for Bengaluru
7.	Input	Intelligence from a reliable source indicates that the AI/ML Study Group is developing machine learning models for traffic analysis in Bengaluru, in collaboration with the Bengaluru Traffic Police and the Karnataka State Police. The project is led by Kiran Reddy and Manpreet Singh with support from Lavanya Subramaniam. The models use computer vision to analyze CCTV footage for traffic violation detection, congestion prediction, and accident hotspot identification. Venkatesh Rao is building the data pipeline and Prakash Hegde is handling the edge computing deployment. The project was initiated after contacts made at the IEEE Conference (ref: TMS-2025-0312) connected the Group with the Karnataka State Police's technology modernization team. Sneha Krishnamurthy is developing an NLP module to analyze traffic incident reports. The Tech Innovation Lab is providing computing resources and Amit Sharma is advising on system architecture. This project represents the first direct law enforcement collaboration for Pinnacle Global Solutions. A pilot deployment at three major junctions in Bengaluru is planned for November 2025.
8.	Grading	B2
9.	Has Attachment	Yes - Technical architecture document
10.	Input Closed
